

MOHAMMED VASHIR

Embedded Systems | Robotics | Automation

Tamil Nadu, India | +91 9360108408 | mohammedvashir75@gmail.com

GitHub / 4techno | LinkedIn | WhatsApp | Reddit

PROFILE

B.Tech Electrical and Electronics Engineering student focused on embedded systems, robotics and automation. Project work spans ESP32-based RF acquisition, multi-sensor IoT systems, robotic-arm CAD and computational kinematics. Developing 4tech as an engineering and prototype-development initiative.

EDUCATION

B.Tech in Electrical and Electronics Engineering | Second year

B.S. Abdur Rahman Crescent Institute of Science and Technology, Vandalur

TECHNICAL SKILLS

Programming: C, C++ with Arduino, Python, MATLAB

Embedded systems: ESP32, Arduino Nano, sensor integration, I2C, SPI, UART, motor and servo control

Design and analysis: SOLIDWORKS, KiCad, inverse kinematics, neural-network modelling

SELECTED PROJECTS AND RESEARCH

Automated Antenna Measurement System | Completed

Developed firmware and wiring for ESP32-based RF acquisition and motorised scanning using AD8317, NEMA17/A4988 and nRF24L01+. Worked on OLED output, live visualisation and CSV data export.

SewerSense IoT Monitoring | Completed

Developed ESP32 firmware and a web dashboard for gas, temperature, humidity and pulse-sensor data. Worked through sensor detection, live data updates and alarm-control issues during hardware testing.

ESP32 Drone Platform | Completed

Developed an ESP32-S3 flight-controller PCB in KiCad for a compact 1S brushed-motor drone. Engineering work covers motor-drive stages, power distribution, USB connectivity and sensor integration. The project combines embedded hardware architecture and compact PCB design.

Robotic Arm Design and Kinematics | Completed

Created a 5-DOF robotic-arm assembly in SOLIDWORKS. Developed analytical inverse-kinematics work for separate 3-DOF and 4-DOF models, explored neural-network approximation, and investigated trajectory-tracking approaches.

INITIATIVE AND STARTUP ENGAGEMENT

4tech | Developing 4tech as an engineering and prototype-development initiative, focused on integrated systems, robotics, RF measurement and practical technical collaboration.

Represented Edutainal Maveric World at Crescent's 5th Mega Demo Day in 2026, explaining the startup's work to students and investors.

CERTIFICATIONS

MATLAB Onramp | MathWorks | February 2026

C Training | EduPyramids, SINE, IIT Bombay | November 2025; score 82.5%
